[1.1 / RE1 / QG1]

The Vineland-3 is a standardized measure of adaptive behavior--the things that people do to function in their everyday lives. This report compares the results from two or more Vineland-3 Parent/Caregiver Forms administered at different times. Please see the Vineland-3 Manual for guidance on interpreting this report.

Subdomain GSV scores are compared for statistically significant changes between *the two most recent* administrations. Shaded cells indicate that a GSV change is significant at $p < .05$, two-tailed. If no cells are shaded, there are no significant changes. Only the GSV scores are compared for statistically significant changes.
